<b>Preface</b>	<b>V</b>
A. Di Domenico	1
<i>Neutral kaon interferometry at a <math>\phi</math>-factory</i>	1
1 Introduction	1
2 The neutral kaon system	3
3 Correlated kaons	6
4 Kaon interferometry at a $\phi$ -factory	7
4.1 Decays into two charged and two neutral pions	9
4.2 Double semileptonic decays	11
4.3 Semileptonic and two pion decays	12
4.4 Decays into identical final states	13
5 Entanglement and neutral kaons	14
6 Decoherence and CPT violation	16
6.1 Furry's hypothesis and a simple decoherence model	16
6.2 A general approach to decoherence	17
6.3 Decoherence and CPT violation due to quantum gravity effects	17
7 CPT violation and Lorentz symmetry breaking	20
7.1 Measurement of $\Delta a_0$ at a $\phi$ -factory	22
7.2 Measurement of $\Delta a_z$ at a $\phi$ -factory	23
7.3 Measurement of $\Delta a_x$ , $\Delta a_y$ at a $\phi$ -factory	24
8 The KLOE experiment at DAΦNE	24
8.1 Decoherence and CPT symmetry tests	25
8.2 CPT symmetry tests with $K_S \rightarrow \pi e \nu$ decays	28
8.3 CPT test from unitarity	29
8.4 Lorentz and CPT symmetries tests	29
9 The KLOE-2 program	30
10 Conclusions	33
References	35

<i>On the quantum gravity phenomenology of multiparticle states</i>	155
1 Introduction	155
2 A perspective on multiparticle states in the quantum-gravity realm	156
3 A simple toy model	159
4 On other areas of quantum-gravity phenomenology	163
4.1 Quantum-Gravity Phenomenology exists	163

4.2	Falsifying theories	165
4.3	Concerning quantum-gravity effects and the status of Quantum-Gravity theories	166
4.3.1	Planck-scale departures from classical spacetime symmetries	167
4.3.2	Planck-scale departures from CPT symmetry	167
4.3.3	Distance fuzziness and spacetime foam	168
4.3.4	Decoherence	169
4.3.5	Planck-scale departures from the Equivalence Principle	169
4.3.6	Critical-dimension SuperString Theory	169
4.3.7	Loop Quantum Gravity	170
4.3.8	Approaches based on noncommutative geometry	171
4.4	On the status of different areas of this phenomenology	172
4.4.1	Planck-scale modifications of Poincaré symmetries	172
4.4.2	Planck-scale modifications of CPT symmetry and Decoherence	172
4.4.3	Distance fuzziness and spacetime foam	173
4.4.4	Decoherence	174
4.4.5	Planck-scale departures from the Equivalence Principle	174
4.5	Aside on Doubly-Special Relativity	174
4.6	More on the phenomenology of departures from Poincaré symmetry	177
4.6.1	On the test theories with modified dispersion relation	177
4.6.2	Photon stability	178
4.6.3	Threshold anomalies	180
4.6.4	Time-of-travel analyses	180
4.6.5	Synchrotron radiation	181
4.6.6	Neutrino observations	181
	References	182

1	Introduction	187

2	Theoretical framework	188
2.1	Two-pion modes	189
2.2	Three-pion modes	190
2.3	Semileptonic channels	191
2.4	Determination of $\text{Re}(\epsilon)$ and $\text{Im}(\delta)$	191
3	Present experimental status and future prospects	192
	Acknowledgements	195
	References	195
	R. Bertlmann, B. Hiesmayr	197
	<i>Strangeness measurements of kaon pairs, CP violation and Bell inequalities</i>	197
1	Introduction	197
2	Kaons as qubits	199
2.1	Quantum states of kaons	199
2.2	Strangeness oscillation	200
2.3	Quasi-spin of kaons and analogy to photons	201
2.4	Measurement procedures	202
3	Entangled kaons, Bell inequalities, CP violation	204
3.1	Entanglement	204
3.2	Bell inequality for quasi-spin variation	206
3.3	Semileptonic decays	206
3.4	Bell inequality for time variation	208
4	Conclusions	211
	Acknowledgements	212

	<i>A review of Bell inequality tests with neutral kaons</i>	217
1	Introduction	217
2	Requirements for a genuine Bell inequality	221

3	Bases in ‘quasi–spin’ space	223
3.1	Strangeness basis: $\{K^0, \underline{K}^0\}$	224
3.2	Free–space basis: $\{K_S, K_L\}$	224
3.3	Inside–matter basis: $\{K_S', K_L'\}$	226
4	Dichotomic measurements on neutral kaon states	228
4.1	Strangeness measurements	228
4.2	Lifetime measurements	229
4.3	Active vs passive measurements	229
5	Entangled states of neutral kaon pairs	230
5.1	Maximally entangled states	230
5.2	Non–maximally entangled states	232
6	Bell inequalities with neutral kaon pairs	233
6.1	Clauser–Horne inequalities	233
6.2	Eberhard inequalities	235
6.3	Clauser–Horne–Shimony–Holt inequalities	236
6.4	Wigner inequalities	238
7	A review of the proposals	239
7.1	Assuming fair sampling and perfect anticorrelation	239
7.1.1	A first proposal	239
7.1.2	Improved proposal with strangeness detection and thin regenerators.....	240
7.2	Assuming fair sampling	241
7.2.1	Proposal with strangeness detection	241
7.2.2	Proposals with lifetime detection and regenerators	242
7.2.3	Proposal with both lifetime and strangeness detection	243
7.3	An attempt of genuine test	245
8	Conclusions	249
	Acknowledgements	249
