PERSONAL DATA

Born in Florence, Italy, on February 19, 1970. Married. Three children.

EDUCATION

- **PhD in Physics** at the Department of Physics of the University of Bologna, Italy. Defense: March 9, 2001. Title of the Thesis: *2-loop radiative corrections to Bhabha scattering in QED*; supervisor Prof. E. Remiddi.
- **Degree in Physics (Laurea)** at the Department of Physics of the University of Florence, Italy. Defense: July 14, 1997. Final grade: 110/110. Title of the Thesis: *Risommazione di contributi perturbativi per sezioni d'urto di produzione di quarks pesanti in QCD* (Resummation of perturbative contributions for heavy-quark production cross-sections in QCD); supervisor Prof. S. Catani.

CURRENT POSITION

Professore di II fascia (Associate Professor) at the University of Rome “La Sapienza”, Rome, Italy.

ITALIAN SCIENTIFIC HABILITATION

Settore concorsuale 02/A2 (SSD FIS/02): habilitation obtained for “Professore di Prima Fascia” (Full Professor). Validity: 8/01/2014 – 8/01/2020.

PROFESSIONAL EXPERIENCE

RESEARCH ACTIVITY in SUMMARY

My research activity regards the phenomenology of the Standard Model (in particular QCD), and its extensions, at hadron and lepton colliders. I am involved in several collaborations working on the study of radiative corrections, at the level of next-to-leading (NLO) and next-to-next-to-leading order (NNLO) in perturbative quantum field theory, for observables that are important for the physics at the Large Hadron proton-proton Collider (LHC) of CERN and at future international linear or circular lepton colliders.

For what concerns lepton colliders, I studied the NNLO QED corrections to the Bhabha scattering cross section, important for the determination of the luminosity of the collider, and the NNLO QCD corrections to the production cross section of heavy quarks, important for observables as the forward-backward asymmetry, that enters the evaluation of the weak mixing angle.

For what concerns hadron colliders, I focused on Higgs and heavy-quark (top) physics. I calculated the NLO (two loops) electroweak corrections due to the light quarks to the Higgs production cross section in gluon fusion, and to the Higgs decay width in the $\gamma\gamma$ channel. I calculated the NLO (two loops) QCD corrections to the production cross section of a scalar Higgs in gluon fusion, within the SM (confirming after 10 years the famous result by Spira-Djouadi-Graudenz-Zerwas) and in models in which fermion and scalar massive colored particles are present. Moreover, I studied the resummation of soft-gluon effects at the NLL accuracy level, for the total cross section of production of heavy-quark pairs in hadronic collisions. I calculated the two-loop corrections to the semileptonic heavy-to-light transition (semileptonic B decay), important for the evaluation of the V_{ub} CKM matrix element.

I am currently working on different topics. Among them:

1. Evaluation of the NNLO QCD corrections to the production cross section of heavy-quark pairs (in particular $t\bar{t}$ pairs) in hadronic collisions.
2. Evaluation of the mixed NNLO QCD-electroweak corrections to the Drell-Yan production of Z and W bosons, of particular importance for a precise determination of the W mass.
3. Evaluation of the NLO corrections (two loops) to the production of $H + j$, and NNLO corrections (three loops) to the production of a Higgs boson, retaining the exact dependence on the heavy-quark mass (top or bottom quarks).
4. Evaluation of the NLO (two loops) QCD corrections to double-Higgs production in hadronic collisions.
5. Evaluation of the NLO corrections (two loops) to the decay width of a Higgs boson in a Z and a photon, and NNLO corrections to the decay width of a Higgs boson in two Z or W bosons.

6. Evaluation of the NLO corrections to the hadro-production of $t\bar{t}$ pairs and single top events mediated by new resonances, as a Z' or W' bosons, interfaced with a Parton Shower.
7. General study of the structure of the higher-order perturbative corrections concerning the functional basis for their analytic expression and the system of differential equations for the Master Integrals of the problem. Particular attention to the case with multiple massive particle cuts and the relation to elliptic integrals.
