

CERN Travel Report to HELEN

Vitor Oguri
Grant HELEN #8 – RT

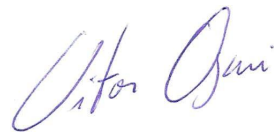

According to my project for HELEN, I was in the period of February, 18 to March, 18 of 2006 in CERN to:

- participate on the CMS week;
- establish a collaboration program on software for the CMS tracking system.

After many meetings with one of the CMS computing project leader, Lucia Silvestris, and with the coordinators Nicola Amapane and Oliver Buchmueller, it was assign to the brazilian group, Andre Sznajder and Vitor Oguri, that we would be responsible for the alignment functionality of the muon chambers on CMSSW.

This work started during the second week of my period in CERN, and it is still carry on, here at my University (UERJ).

The CMS week occurred between 13 and 17 of March, when I attend plenary sessions and meetings concern Muon and Tracker Alignment.
